Value Driven PMO Roles at Ticketmaster John McIntyre

The PMO Conference

11th June 2015

WHAT IF THE PMO DISAPEARED?

1. Projects would still be delivered
2. Products would still get to market
3. We would continue to expand
...but slower

Seven core competencies of Business Agility

But wait...

Where does the
PMO fit in to all
of this?

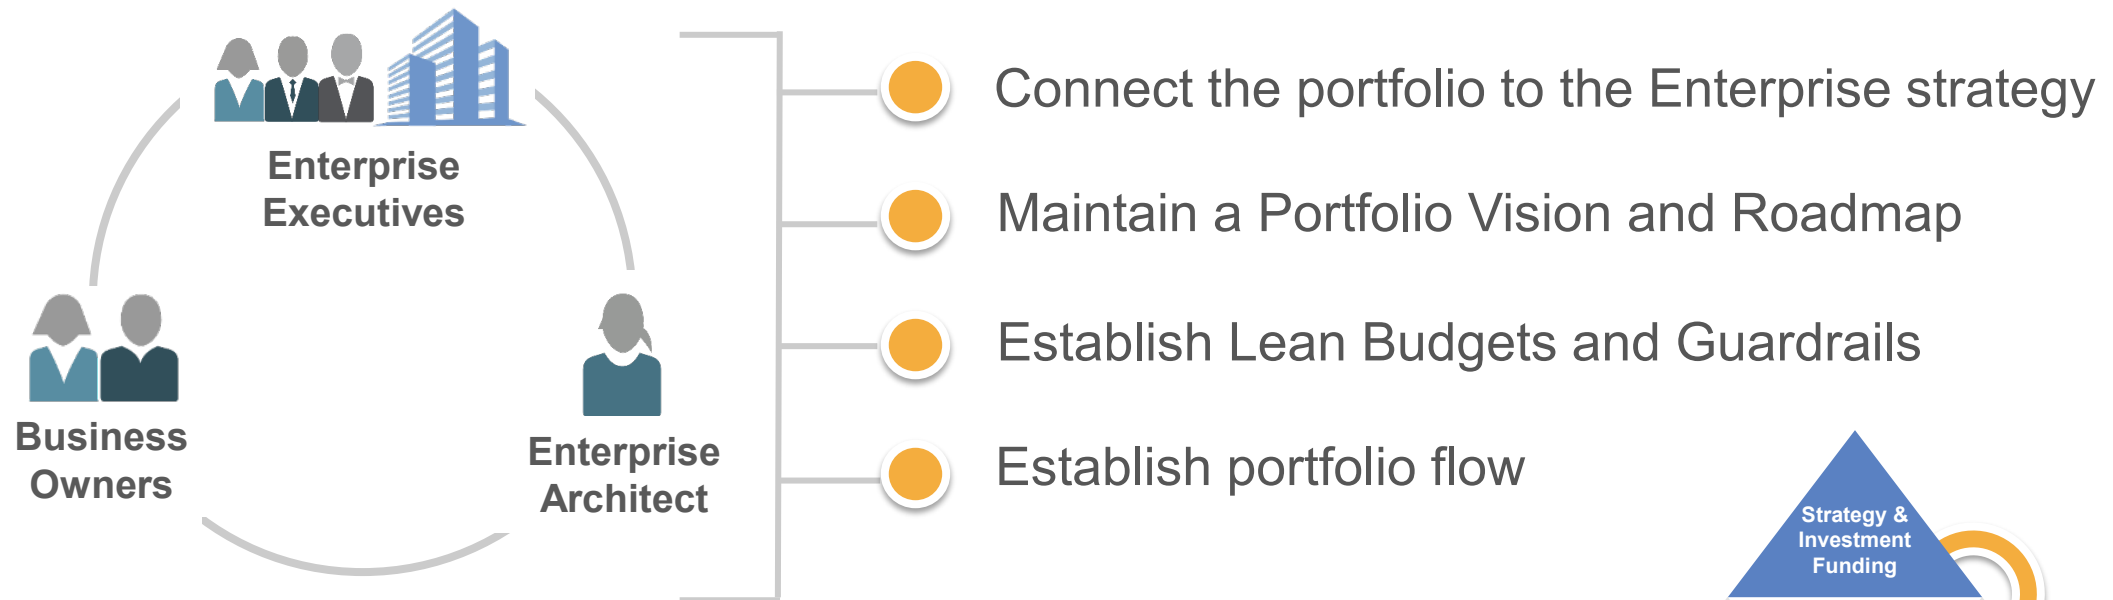

Lean Portfolio Management

The Lean Portfolio Management competency aligns strategy and execution by applying Lean and systems thinking approaches to strategy and investment funding, Agile portfolio operations, and governance.

Meet business targets with strategy and investment funding

Strategy and investment funding ensures that the entire portfolio is aligned and funded to create and maintain the solutions needed to meet business targets.

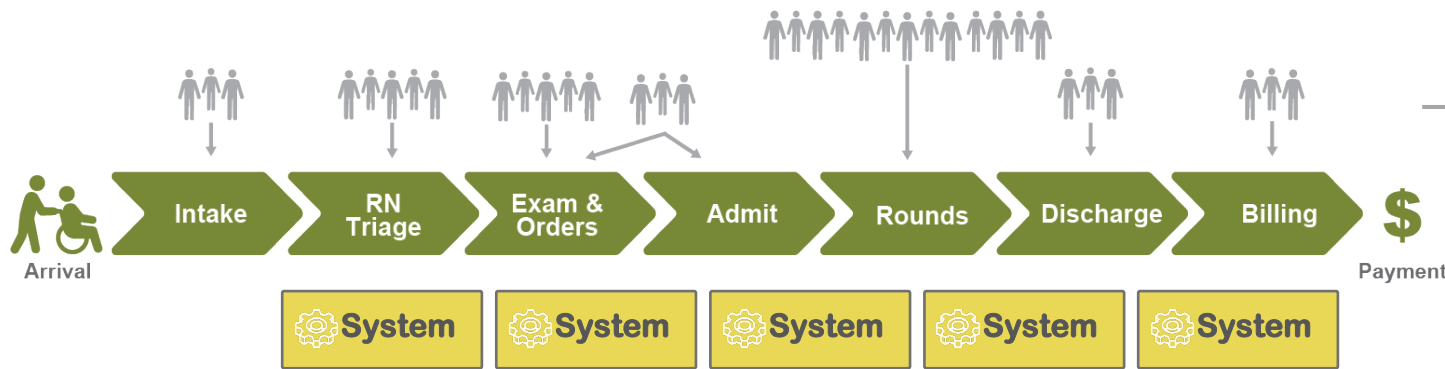

Fund value streams aligned with the business strategy

Funding value streams instead of projects provides the following benefits:

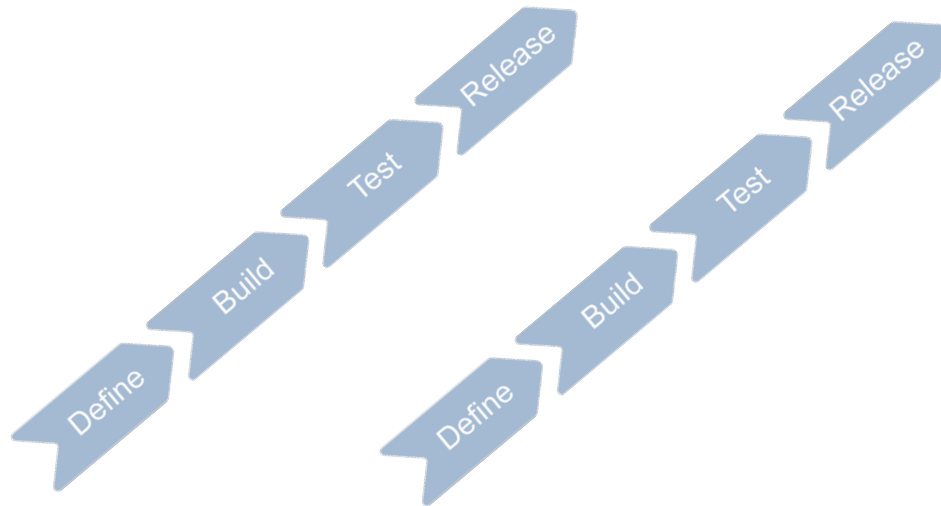

- ▶ Full control of spend
- ▶ No costly and delay-inducing project cost variance analyses
- ▶ No resource reassignments
- ▶ No blame game for project overruns

Operational Value Streams

Deliver end customer value

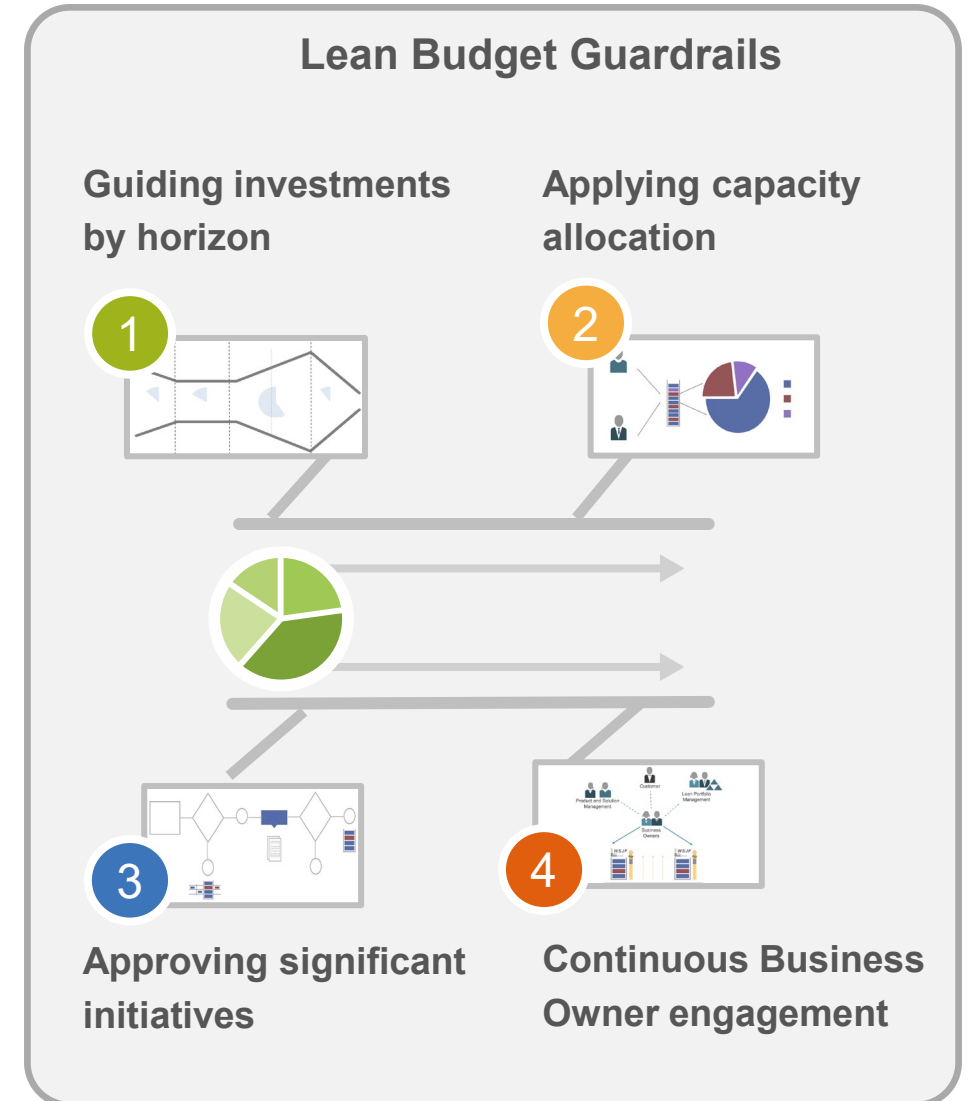

Development Value Streams

Build the systems and capabilities that enable Operational Value Streams

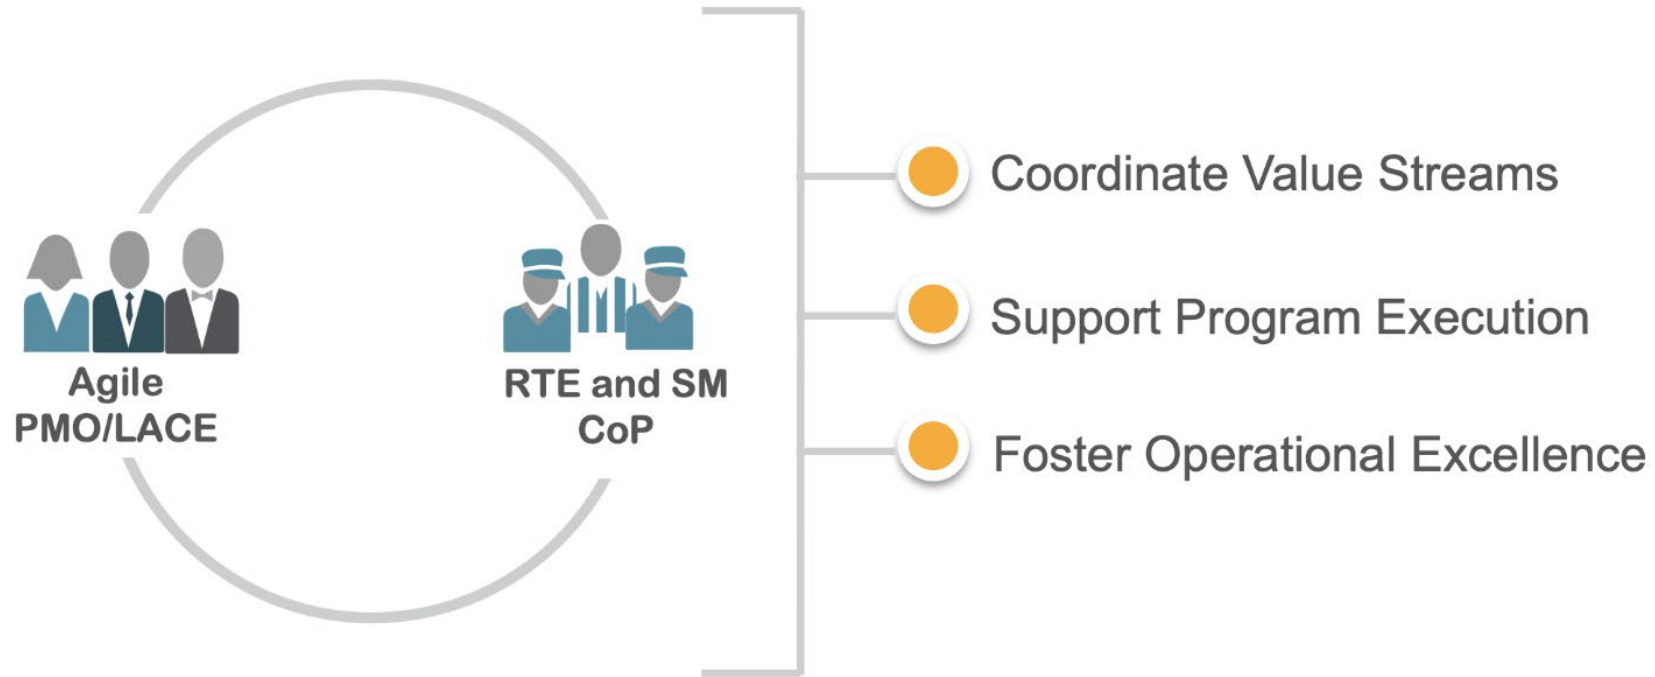

Ensuring continued alignment with Lean budget guardrails

Guardrails describe portfolio-level budgeting, spending, and governance policies that:

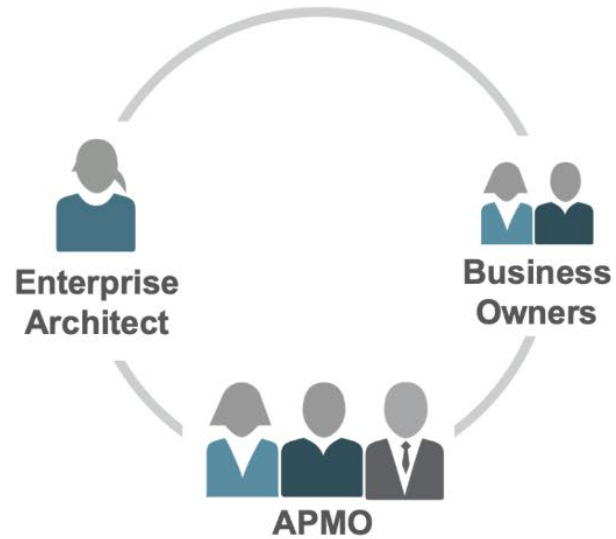

1. Ensure the mix of investments balance near-term opportunities and long-term strategy and growth
2. Balance the backlog of new business Features with the need to continuously invest in the Architectural Runway and maintenance to avoid obsolescence and tech debt
3. Ensure large, significant investments (Epics) are approved appropriately
4. Actively engage Business Owners to ensure the priorities of the ARTs and Solution Trains are in alignment with the portfolio

Agile Portfolio Operations

Lean Governance

- Forecast and budget dynamically
- Measure portfolio performance
- Coordinate continuous compliance

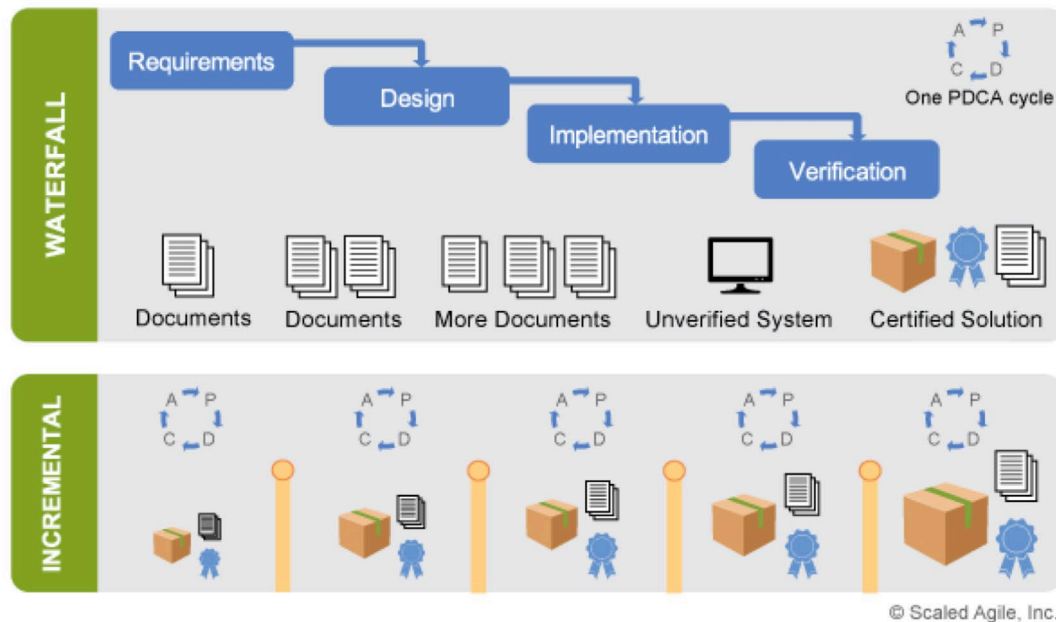

Evaluating progress toward meeting portfolio objectives

Goals	Measures	Desired Benefits
Employee Engagement	Employee surveys; Agile People Operations data	Improved employee satisfaction, higher employee engagement, and better business outcomes
Customer Satisfaction	Net Promoter Score (NPS)	Improved customer experiences and loyalty
Partner Health	Partner and vendor surveys	Improved ecosystem relationships
Business Agility	Business Agility self-assessment	Improved ability to respond to market changes, emerging opportunities and threats
Portfolio Performance	Objectives and Key Results (OKRs); LPM Self-Assessment	Better alignment and improved progress toward the portfolio's strategic themes, and portfolio performance
Value Stream Performance	Value Stream KPIs	Improved performance against the forecasted business outcomes
Program Predictability	Program predictability measure	Improved actual business value achieved
Time-to-Market	Number of releases; feature cycle time	More frequent releases; faster feature delivery
Relentless improvement	Self-assessments for each level of the Framework	Relentless improvement in team, program and portfolio performance
Quality	Defect count and cycle time; support call volume; escaped defects	Improved customer satisfaction; reduced support call volume, and lower product development costs

Coordinating Continuous Compliance

A Lean-Agile quality management system (QMS) improves quality and makes compliance more predictable.

Defer compliance to the end of Solution development.

Validate ongoing compliance with relevant standards and regulations.

Without Lean Portfolio Management

- Strategy is unclear to those who must execute it
- Our project funding model causes internal friction, overhead, incessant internal negotiations, and inhibits innovation
- Agile practices across the portfolio are different, confusing and problematic
- Current metrics reflect processes and outputs, not outcomes
- Our governance practices interfere with value flow and time to market

The PMO...

- Keeps everything (and everyone) connected
- Oversees budgeting and planning
- Constant vigilance of metrics
